Brief introduction

- 1.Using the latest manufacturing technology, the cable arrangement is more stable, and the running position is significantly reduced when the cable is broken.
- 2.Optimize the mechanical structure design, improve the overall mechanical performance, and further reduce repeated positioning errors.
- 3.Using high-resolution servo motor, the twist angle is more accurate.
- 4.The spindle is developed and produced using German technology, and the runout error is further reduced to meet the high inner diameter requirements of various springs and coils.
- 5.Products are widely used in electronics, digital, mobile phones, automobiles and other industries.

Features:

- 1.The machine use PC control,servo dynamic,mechanical regulation is simple.
sports location,can produce all kinds of more complex shape of twist spring
Can produce more singlelayer, multilayer, round wire, flat line and so on
various classes complex shape of air-core coil inductance
- 2.PC control system adopts the domestic top CNC controller, high-performance dual core CPU, Windows interface, 10 inch LCD screen, Clearly.intuitive, and stable operation, easy, simple and easy to operate.
- 3.Power system for imported high precision servo motor and CNC control System.That third shaft organic matching is cruelly synchronicities, sports reliable Controller, precise movement displacement of high requirements, can produce all kinds of coil products.
- 4.The machine can be equipped with autormatic wire frame to cooperate to use.The machine optional enameled wire stripping machine, inelligent temperature controller can achieve tin stove, Coil inductance skinning tin, molding letup.
